

Digital Technology, Inc.

Truly Affordable Document Management Solutions

Manufacturing

As a manufacturer there are many challenges in today's economic climate, and some of them might include getting paid promptly by customers and, in turn, having all the necessary documentation in place to pay your valued suppliers on time. The inefficiency that exists in these processes is staggering due to the number of computer and non-computer generated documents that must come together from diverse locations and be reconciled before a check can be issued by the customer or to a supplier.

Historically, request for a statement, invoice, pick ticket, purchase order, credit memo or proof of delivery required time and labor intensive research of paper document files. Once the target documents were located, there was the additional time and cost of forwarding copies to the requesting client to finalize outstanding AR/AP payment resolution issues.

While new innovative technology is being developed, the manufacturing industry must work to effectively incorporate advances into existing manufacturing operations while maximizing productivity and profitability. Pressures to increase production levels while reducing costs, make better use of information about physical assets and facilities, and compete effectively in a highly competitive business environment, present ongoing challenges within the manufacturing industry.

In response to these business pressures, manufacturers are increasingly adopting new technology-based strategies. To remain competitive, they are adopting technology that can assist them in managing the challenges faced in production and distribution. In a supply chain environment, timely accurate information is of the utmost importance. Digital Technology, Inc. (DTI) can provide relevant information to all business processes, ranging from order management to inventory control, fulfillment, and accounts receivable, to keep all stages of all processes flowing.

Additionally, DTI can be interfaced seamlessly with your CRM, ERP, or other e-business applications providing relevant, timely information to everyone upon request. Whether your organization has standardized on a traditional client/server platform or on thin web-client interfaces, DTI will help you meet your integrated information management needs and goals.

By choosing Digital Technology, Inc., you will find an organization and product that are committed to providing high quality service and product offerings, and most importantly, an organization that puts servicing the customer with integrity first.
