DTI provides film, CD/DVD & Web based storage and retrieval systems for print stream (computer data) and scanned (paper originated) documents. DTI blends CD/DVD archive and Web Hosted Electronic Record Management System's to provide solutions to bring to market tailored solutions for the conversion, distribution and archiving of digital documents.

DTI buys and builds software to blend the two together into a combination of Web browser based Inter/Intra/Extranet and/or archive CD-R/DVD-R disc media based electronic document solutions.

DTI integrates print streams and scanned documents into a digital format to enable a search, access and display via a standard web browser. The system supports multiple indexes as well as the ability to link any document type to any given transaction all of this is done with a zero resource impact implementation process.

Our business philosophy is simple. Understand what the client needs. Match deliverables to the client's expectation. Give the customer consistent, honest and reliable service at a fair and reasonable price.
